Voice prosthesis accessories
for professionals

**Provox® Trocar with cannula**
This instrument is used for making primary or secondary TE punctures and is preferred to using a scalpel. After the trocar is withdrawn, the Provox Guidewire is inserted through the cannula.

**Benefits:**
- Creates a round fistula, leaving the surrounding tissue intact.
- Designed to be used in combination with the Pharynx Protector.
- Re-sterilizable.

**Provox® Pharynx Protector**
The Provox Pharynx Protector helps protect the pharyngeal walls from accidental piercing during primary TE puncture. It can also reduce the risk of injury to the surgeon.

**Benefits:**
- Reduces risks during puncture.
- Easily changed to accommodate use with either left or right hand.
- Re-sterilizable.

**Provox® Guidewire**
The Provox Guidewire enables retrograde insertion of all Provox indwelling prostheses. The tip contains a retainer slit that holds the security string of the prosthesis. There is also a stop on the guidewire shaft to allow extraction of the old prosthesis (after the tracheal flange has been cut off). To be used only with Provox indwelling voice prostheses.

**Benefits:**
- Well-known tool for many clinicians.
- Bendable tip facilitates easier insertion.
- Disposable, single-patient use.
Provox® XtraFlange™
Provox XtraFlange is a silicone washer, intended to reduce periprosthetic leakage in patients using indwelling Provox voice prostheses.

Periprosthetic leakage (leakage around) is a known problem for users of any type of voice prosthesis. This type of leakage is detected in 11-13% of voice prosthesis replacements. The security medallion is cut off after replacement when the proper placement is confirmed. Not available for sale in the US.

Benefits:
• Easy, quick, cost-effective solution to a common problem.
• The flimsy material adheres to the mucosa and prevents tissue irritation. Not intended to be glued.
• Available in three diameters, corresponding to the diameters of Provox voice prostheses.

Provox® Measure
The Provox Measure is used to check the length (corresponding to prosthesis size) of TE fistulas. The correct prosthesis size (1-2 mm longer than the puncture) is important to minimize the risk of complications. The size should always be checked when a prosthesis is replaced.

When in doubt always choose the longer version. An overly tight fit can harm the tissue.

Benefits:
• Ensures that a voice prosthesis of the correct size is used.

Provox® Dilator
The Provox Dilator is used for increasing the diameter of a TE fistula by stepwise dilation.

Benefits:
• A retention collar at the end of each section prevents that section from sliding back to the preceding thinner section. Diameter at tip: 15 Fr (increases to 24 Fr in one device). Steps: 18, 20, 22, 24 Fr.
• Re-sterilizable.

Two smaller dilators are also available; for dilating 17Fr or 20Fr punctures.

For ordering information, please see on page 29
**Provox® Brush**

The Provox Brush is for cleaning, the inside of the Provox voice prosthesis without removing it from the TE-fistula. Safety wings on the brush shaft help prevent accidental aspiration of the Provox Brush. Available in two lengths.

**Benefits:**
- Easy and efficient cleaning, which helps maintain good hygiene.
- May be bent for individual fitting.
- Also used to insert the Provox Plug or Provox Vega Plug.
- May be disinfected in alcohol or hydrogenperoxide for optimal hygiene.

---

**Provox® Flush**

The Provox Flush is a cleaning device with several attractive features. The Provox Flush allows flushing air or fresh drinking water (under slight pressure) through the lumen of the prosthesis thereby helping to clean debris and crusts from the prosthesis as well as flushing mucus out of the pharynx and esophagus.

**Benefits:**
- In experimental studies, regular use of the Provox Flush has been shown to prolong the of device lifetime of voice prostheses, even if only used with air.
- May be bent for individual fitting.
- May be disinfected in alcohol or hydrogenperoxide for optimal hygiene.
**Provox® Plug & Provox® Vega™ Plug**

The Provox Plug is a first-aid tool for temporarily stopping leakage through the prosthesis.

The plug is inserted into the opening of the Provox voice prosthesis with the help of the non-bristled end of a Provox Brush. The medallion end can be taped to the skin if desired. Although speech is not possible while the Provox Plug is in place, it is possible again after the plug is removed by pulling on the safety strap.

**Benefits:**
- The patient is able to quickly stop leakage before visiting a professional.
- May be disinfected in alcohol or hydrogenperoxide for optimal hygiene.

Note: Provox Vega Plug is for Provox Vega prostheses and Provox Plug is for Provox 2, Provox (1) and Provox ActiValve.
Accessories for HME attachments

**Remove™**
This product is used to remove any residue (from silicone glue) left behind by the application of base plates. It is recommended that Remove first be applied directly on top of a base plate where it penetrates the material. Using Remove leaves an oily residue on the skin. Clean the skin (using a Provox Cleaning Towel) before applying a new adhesive.

**Benefits:**
- Helps maintain good hygiene.

**Provox® Cleaning Towel**
Provox Cleaning Towels remove oil from the skin. They are alcohol-based and non-perfumed.

**Benefits:**
- Helps maintain good hygiene.

**Skin-Prep™**
Skin-Prep improves the adhesion of Provox baseplates by forming a thin, protective barrier on the skin.

**Benefits:**
- Gentle skin preparation for better adhesion.
**Provox® HME Cap**

The Provox HME Cap is a dome-shape titanium ring that allows use of the special FreeHands HME cassettes without the Provox FreeHands HME valve unit. This can be convenient, e.g. for night use or if no regular Provox HME cassettes are available.

The HME Cap snaps onto a FreeHands HME cassette, which is then used like a regular Provox HME cassette. Although the HME Cap lacks the benefits of a lid/spring valve mechanism and side openings (found in regular Provox HME cassettes), it does allow the stoma to be closed manually for speech.

**Benefits:**
- Enables use of the special FreeHands HME cassettes without the Provox FreeHands HME valve unit.
- Can help patients who have difficulties operating a normal occludable HME cassette.

Note: Do not use the FreeHands HME cassettes separately!

---

**Provox® Silicone Glue**

Provox Silicone Glue is a liquid glue for skin application that cures on contact with the air. The use of Skin-Prep before application of silicone glue is normally recommended. Long-term use may cause skin irritation and is not suitable for all users.

**Benefits:**
- Strong and quick adhesion.

---

**Skin Tac**

Skin Tac improves adhesion of appliances and tape to the skin. Also works as a barrier between tape and skin to reduce irritation. Skin Tac is hypo-allergenic and latex-free. Remove with rubbing alcohol.

**Benefits:**
- Ideal for users who need strong, quick adhesion.
Provox® HME Cassette Adaptor

Enables users to connect Provox HME Cassettes to any tracheal cannula that has a 15 mm ISO connector.

Benefits:
• Allows the usage of Provox XtraFlow HME in combination with tracheal cannulas of other brands.

Provox® ShowerAid

The Provox ShowerAid is used with Provox Adhesives (FlexiDerm or Regular). Used as a temporary replacement for a Provox HME Cassette while taking a shower.

Benefits:
• Makes it possible for patients to shower.
• Facilitates good hygiene for persons with tracheostomas.

Note: Do not use with OptiDerm!

Provox® BasePlate Adaptor

The Provox BasePlate Adaptor allows the attachment of other devices with ISO 15 mm standard connectors to a Provox Adhesive base plate, a Provox LaryButton or a Provox LaryTube cannula. A typical example would be to attach the TrachPhone, an HME with a built-in oxygen port. *The BasePlate adaptor is not available in all markets.*

Benefits:
• Enables attachment of devices with that have 15 mm standard connectors (e.g. tracheostomy devices) to the Provox attachment devices.

For ordering information, please see on page 30
Accessories for tracheostoma support

Provox® Fenestration Punch
The Provox Fenestration Punch is used to make small fenestrations in the LaryTube at the desired location.

Benefits:
• For custom-made individualized fenestrations of LaryTubes.
• Enables voicing for patients who use a voice prosthesis.

Provox® TubeBrush
Designed for easier handling and improved hygiene.

Benefits:
• Helps maintain good hygiene for LaryTube users.

Provox® TubeHolder
The Provox TubeHolder has been developed exclusively for use with the Provox LaryTube and Provox LaryButton. The integrated clip connectors allow for optimal fit to the wings of the Provox LaryTube and LaryButton, which reduces the physical stress on the soft silicone material.

Benefits:
• Gentle for users with sensitive skin around the tracheostoma.

Provox® LaryClip
The Provox LaryClip is an alternative to the Provox TubeHolder. It is a two-piece system that helps to optimize the air-tight attachment of the Provox LaryButton and the Provox LaryTube to the stoma.

It consists of a square adhesive base and a hook-and-loop clip that allows for optimal fit to the wings of the Provox LaryButton and LaryTube. When the adhesive Base is attached to the skin at both sides of the stoma and is eventually removed due to loss of its stickiness, the Clip part can be removed and re-attached as needed.

Benefits:
• Strong FlexiDerm adhesive properties.
• May be taped to the most optimal area of the skin around the stoma.

For ordering information, please see on page 30
Educational resources

At Atos Medical, we seek to increase awareness and knowledge regarding post-laryngectomy rehabilitation options. We offer the following material as a courtesy to the dedicated professional.

Starter kits
- Provox HME Starter Kit.
- Provox HME Let’s Start sample bag.
- Provox FreeHands HME.
See ordering information on page 30 for contents of the starter kits.

Instructional CD:s and DVD:s
- Provox Vega Insertion animation CD
- Provox HME DVD – comprehensive presentation of all HME products and interviews with patients.
- Picture CD-ROM
- Olfaction Rehabilitation CD
- Secondary Puncture DVD (Spanish/English)
- Provox Instructional Movies (PAL)
- Provox Instructional Movies (NTSC)

Artificial Fistula model
For practice and demonstration of the Provox Vega, Provox2, Provox(1) and NiD insertion and replacement methods.

Life as a laryngectomee
A patient and family guide that provide an introduction to post-laryngectomy rehabilitation. Explains the rationale behind Provox products.
Available in several languages.

For ordering information, please see on page 30
Digital media, photos & illustrations
Atos Medical has a variety of digital media recommended for lectures as well as education. Such as a number of different movies and anatomy illustrations.

- Benefits from using an HME - a 3D animation where the airways are explored, showing the difference between using an HME or not.
- Anatomical drawings - great for educational purposes; illustrate the anatomy before and after a laryngectomy and show how the different devices work.

For more information contact your local Atos Medical representative.

Lary Logics
A package of product information, maintenance guidance and speech exercises. For clinicians to use in their work with laryngectomized persons.

- How to clean devices
- Troubleshooting
- Learn how to voice
- ...and much more

For more information contact your local Atos Medical representative.

www.atosmedical.com
Atos Medical’s international website features updated product information, clinical references for professionals, along with information for laryngectomees and their relatives.

Country sites with local information are also found here.

www.provoxweb.info
A comprehensive practical guide to postlaryngectomy rehabilitation - including animations, movies, PDFs and much more.

Provox® Voice Prostheses

The above references represent a selection. For more information contact Atlas Medical AB or your local representative.
Atos Medical products and expertise are developed in close cooperation with leading institutions, doctors, researchers, speech language pathologists and patients from all over the world. All our claims and arguments rest on the results of clinical studies. Atos Medical started the research and development on the first Provox voice prosthesis in 1987. Throughout the years, we have worked hard to develop Provox as the leading voice and pulmonary rehabilitation system on the market. We continue to allocate substantial resources for product development and training programs for Ear, Nose and Throat specialties. Our goal is clear: Atos Medical will continue to lead the way in ENT.
